Consecutive days in the 260-day calendar are listed within the cells of the calendar.

Each year in this calendar is initially named. Type I year bearers are indicated: Sun, Death, Monkey, Owl?.

Each day of the month numbered 0 in this calendar probably was known anciently as the "seating" or beginning of the month and it was followed with the 19 numbered days of that month. The use of 0 is a modern convention to represent the "seating" day.

The listed dates use a more recent spelling of Tikal month names than that used by Edmonson.
